The prior art of record Shibata (US. 6,193, 132) discloses a method of bonding a

semiconductor chip. Shibata does not disclose or even suggest, "wherein when the first detection point deviates within a deviation area beyond a view field of the image pickup camera, said recognizing comprises detecting the first detection point by moving the view field of the image pickup camera in a serpentine manner in the X direction and the Y direction within the deviation area starting from a first point, the first point being one of four corners of the deviation area", as to Nishimaki reference Is directed to a wire bonder and wire bonding method, in which an IC chip is supported on a bonding stage. A camera and a bonding head are connected to an X –Y table so that the X-Y table can move the camera and the bonding head as necessary. Nishimaki reference does not discloses or suggest "wherein when the first detection point deviates within a deviation area beyond a view field of the image pickup camera, said recognizing comprises detecting the first detection point by moving the view field of the image pickup camera in a serpentine manner in the X direction and the Y direction within the deviation area starting from a first point, the first point being one of four corners of the deviation area", as commonly included in each of the independent claim 16, 20, 23, 24 ,29 and 32, the prior art of record fails to teach either singularly or in combination; fails to anticipate or render the above limitations obvious.
